Threat Assessment ARGO
Powered by TAM-C Solutions

TAM·C

Threat Assessment ARGO is a smart web intelligence solution based on social media, search engines, and additional sources that produce comprehensive risk assessments on subjects of concern.

Relevant data on subjects of concern or region-specific threats and hazards are collected and automatically analyzed.

Data is ranked by relevance and risk level by security analysts who are real people working 24/7 to help keep you safe.

All phases of threat assessment and management are captured to reduce risk, prevent violence, and provide leaders with information to safeguard those entrusted to their care.

KEY COMPONENTS

Threat Assessment ARGO merges cutting-edge, pre-incident, AI monitoring, essential real-human data analysis, and a comprehensive threat assessment and management tool, validated by the U.S. Secret Service National Threat Assessment Center.

The one-of-a-kind program organizes all data in one central place for effective collaboration to reduce risk.

ARGO Technology
- Global secure fusion platform
- Functions as a single, unified solution
- Designed for schools and a variety of verticals

Global Security Operations Center
- Actionable and tailored intelligence related to threats and hazards
- 24/7 situational awareness by providing actionable intelligence
- Multi-language monitoring and dissemination of information
- Multi-risk monitoring of natural and human-caused threats

Priority Safety Alerting and Reporting
- Fully automated with smart algorithms and dynamic discoveries
- Contextual narrative analysis, customized
- Structured and unstructured data analysis engines
- Advanced investigation capabilities, including targeted and leadless inquiries
- Bulk import of pedigree information to identify all possible profiles
